PROTECTIVE SOLUTIONS

The TSItouch Solution

is a fully custom steel chassis integrated with tempered cover glass which provides increased durability and protection to the display. This protection is not limited to accidental impacts, but also serves to protect the sensitive display from the impact of more frequent cleaning. Our protective solutions are designed to blend in with our touch interactive solutions, allowing for a consistent look and feel across touch and non-touch displays.

Easy Integration
 Unrivaled simplicity makes installation easier and faster

Superior Design
 Full steel chassis combined with tempered glass provides unparalleled protection to the display

Customizable
 Custom colors and silk screening available. Black, white, and silver finishes are all commonly available. Choose from different sizes.

Easy to Clean
 The available sealed front surface reduces harborage of debris, making cleaning easier, while also keeping liquids from entering the face of the display

ADDITIONAL SAFETY Antimicrobial Film and Perimeter Seal

Antimicrobial Film:

Provides an inhospitable environment for many pathogens preventing them from reproducing and spreading. As the suppression time varies from pathogen to pathogen, the Antimicrobial film provides an additional layer of protection when combined with routine cleaning.

Perimeter Seal:

Our optional sealing system is precision cut to fit our touch frames and uses a specialty adhesive designed for use in harsh environments. The adhesive is UV stable and is designed by the manufacturer to withstand frequent exposure to not only common cleaners, but even more aggressive antiseptic products.
